

POMA is an enterprise application for the Management of Physician Standing Orders. POMA improves the utilization of physician and nurse resources by automating physician orders. POMA provides a platform to create and delegate physician orders to nurses and physician assistants.

Integration with Healthcare Applications

POMA provides interfaces to other healthcare applications. It receives patient identification information and populates the physician order. It exports the completed order to patient's chart.

Fast Search Capability

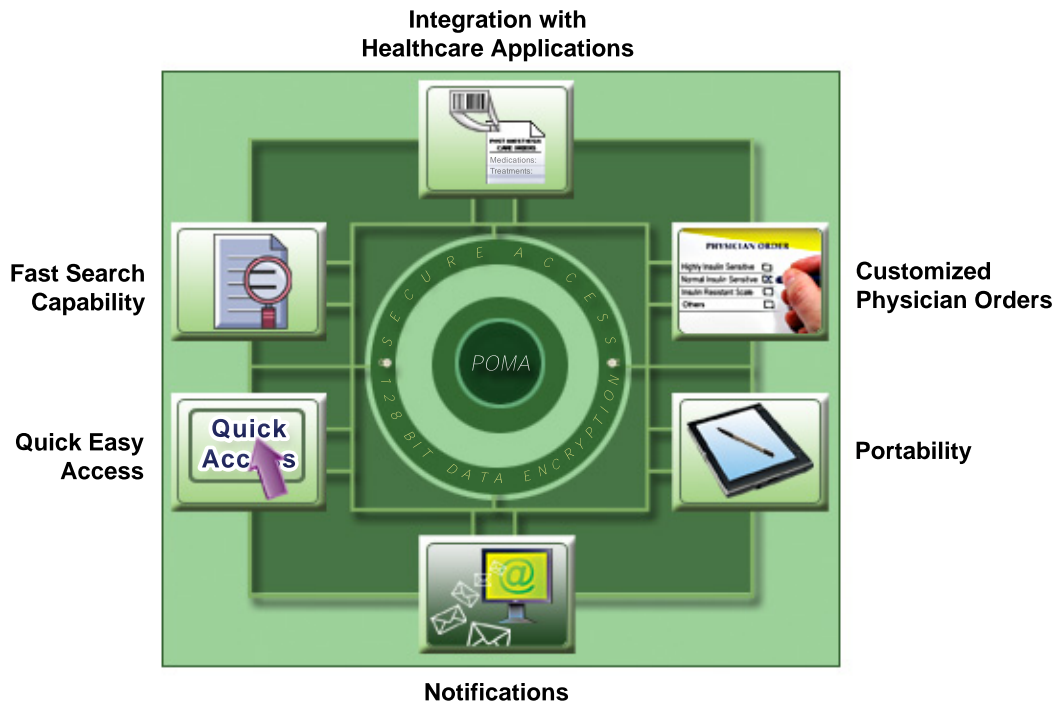

POMA utilizes a powerful search engine that enables the physician and hospital staff to search for standing orders quickly--saving valuable time.

Customized Physician Orders

POMA allows orders to be customized for individual physicians. It manages standard orders and physicians' custom orders. POMA groups orders most frequently used by a physician and creates physician specific order sets for quick and easy access.

Portability

POMA provides a framework for creating and managing standing orders across different departments. POMA uses PDF format and allows the orders to be viewed from any work station.

Quick Easy Access

Physicians can conveniently group frequently used standing orders into a quick and convenient access area.

POMA automates physician orders, reduces paper usage and increases efficiency in healthcare delivery.

Notifications

Physicians are notified about changes to orders, the deletion of existing orders and the inclusion of new orders--keeping them informed.

We match innovation with technology to build high value solutions that meet your business goals.
